

TITLE of the INVENTION

Transcoding of digital data

TEXT of the ABSTRACT

The invention concerns a method of transcoding digital data coded according to a first coding mode into digital data coded according to a second coding mode,

characterized in that it comprises the steps of:

- detecting (E1) the inactivity of resources useful for the transcoding,
- transcoding (E4) the digital data coded according to the first coding mode into the digital data coded according to the second coding mode, when the inactivity is detected.
